Abstract:

Food waste (FW) is defined as "raw or cooked food discarded at any point of the food production and supply line, encompassing manufacturing/production, distribution, wholesale/retail, food service and household preparation" [1]. The efficiency in food production/processing/consumption is unlikely to increase up to the point where FW is completely eliminated. Therefore, the disposal of inevitable FW should be oriented for the generation of additional value. Food waste is mainly composed of carbohydrates, proteins, fats, among other functionalised compounds [2]. These can be used as substrate in biochemical processes, such as dark fermentation (DF), for the production of energy vectors, electricity and chemical precursors for bioplastics [3].

This study evaluated FW conversion through DF and tested the effect of adding a H₂-producing microorganism as process biocatalyst. The FW samples were prepared and characterised as described previously [4]. Batch fermentations were performed in a 1.65 L bioreactor, operated at 37 °C, pH \ge 5.5, containing 100 g of FW (20 g/L total sugars) [4]. *Clostridium butyricum* DSM 10702 was added as biocatalyst (5% v/v) under non-sterile conditions, and the cumulative H₂ production reached 1.7 L/L, with a H₂ productivity and production yield of 146 mL/L.h and 37.5 mL/g, respectively. However, the cumulative H₂ production decreased by 60.5% over the sterile fermentations. To overcome this problem, by reducing the sample contamination and enhancing the effect of the biocatalyst addition, a stage of FW pretreatment by microwave, acid addition, or microwave and acid was introduced. The result was a decrease of 43, 49 and 68% c.f.u., respectively, of the pretreated *vs* untreated FW sample. The most effective pretreatment was applied to FW and the H₂ production was compared. The performed study aims to improve the efficiency and possible scalability of FW biochemical conversion, keeping pretreatment conditions (handling/processing) simple enough to be perform at the household level.
